SE Lab 1 – Requirements Engineering

Problem Statement #14: Corporate Mental Wellness & Counseling Platform

Team Number: 14

Team Members: Mohit.S (PES1UG24AM166) · Pradeep R (PES1UG25AM809) · Niranjan S (PES1UG24AM177) · Meharajuddin (PES1UG24AM159)

Lab 1: Requirements Engineering and UML Use-Case Modelling

1. Problem Context & Overview

An anonymous enterprise counseling portal allowing employees to assess stress levels, book confidential sessions with licensed therapists, and track personal wellness indicators without employer identity disclosure.

2. Target Stakeholders / Actors

- Corporate Employee
- Licensed Therapist

3. Functional Requirements

5 Functional Requirements (FR-001–FR-005) and 2 Non-Functional Requirements (NFR-001–NFR-002)

ID	Type	Priority	Description	Acceptance Criteria	Rationale
FR-001	Functional	High	The system shall generate an anonymized pseudo-ID for employee accounts to book counseling sessions without revealing corporate email or employee ID to the therapist.	Pass: Therapist dashboard displays pseudo-ID only. Fail: Employee PII is exposed in booking metadata.	Employee anonymity is essential to maintain confidentiality and encourage employees to seek counseling.
FR-002	Functional	High	The system shall allow employees to complete a stress-level assessment and view their resulting assessment result.	Pass: Employee completes the assessment and the system displays the stress level. Fail: The assessment cannot be submitted or no result is generated.	Stress assessment helps employees identify their current wellness needs and supports the identification of potential wellness needs.
FR-003	Functional	High	The system shall allow employees to view available appointment slots and book confidential counseling sessions with licensed therapists.	Pass: The employee selects an available therapist and appointment slot, and the system successfully confirms the booking. Fail: The system allows booking of an unavailable slot or fails to confirm a valid appointment.	Booking counseling sessions is a core function of the platform and enables employees to access confidential professional mental wellness support.

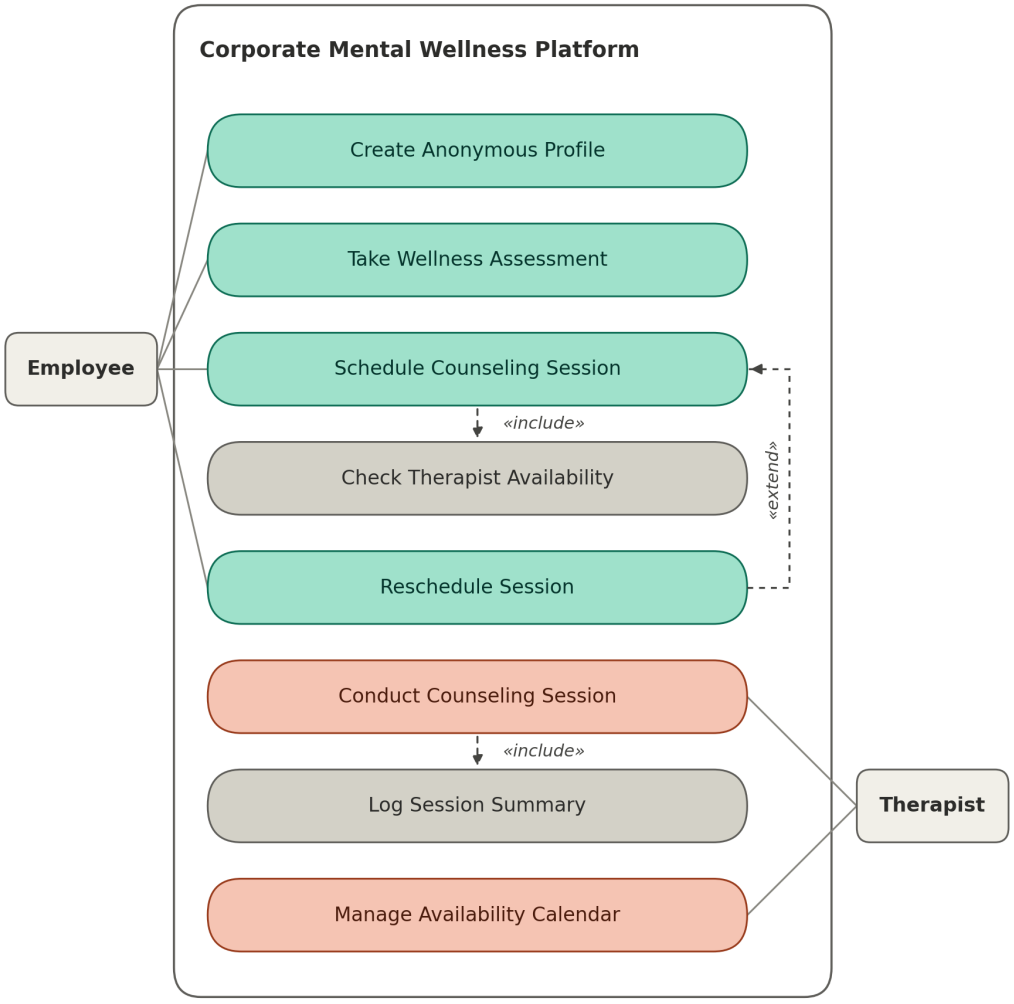

ID	Type	Priority	Description	Acceptance Criteria	Rationale
FR-004	Functional	High	The system shall allow licensed therapists to view their assigned counseling appointments and the employee's pseudo-ID without seeing the employee's corporate email or employee ID.	Pass: The therapist can view assigned appointment details and the employee's pseudo-IDs. Fail: The therapist cannot access assigned appointments, or employee corporate identity information is displayed.	Therapists need access to their scheduled appointments to manage and conduct counseling sessions while preserving employee anonymity and confidentiality.
FR-005	Functional	Medium	The system shall allow employees to record and track personal wellness indicators and view their previously recorded wellness information.	Pass: The employee can record wellness indicators and view their wellness information over time. Fail: Wellness information is not saved correctly or cannot be retrieved by the employee.	Tracking wellness indicators allows employees to monitor changes in their well-being over time and supports personal awareness of their mental wellness.

4. Non-Functional Requirements

ID	Type	Priority	Description	Acceptance Criteria	Rationale
NFR-001	Performance & Security	High	The appointment scheduler must handle timezone conversions accurately across global office locations.	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load. Fail: The system produces incorrect timezone conversions, fails to meet the target latency, or does not meet the required security standards under simulated peak load.	Accurate timezone conversion and reliable performance and security are necessary to ensure employees and therapists across global office locations can schedule counseling sessions correctly and securely.
NFR-002	Security & Privacy	High	The system must protect employee counseling and wellness information from unauthorized access or disclosure.	Pass: Only authorized users can access relevant counseling and wellness information, and employee corporate identity information remains confidential. Fail: Unauthorized users can access confidential employee information, or employee corporate identity information is exposed without authorization.	Counseling and wellness information is highly sensitive. Strong privacy and security are necessary to protect employees, maintain confidentiality, and build trust in the platform.

5. UML Use-Case Diagram (Alternate Version)

Actors: Corporate Employee and Licensed Therapist (unchanged from the original model). The use-case set below is a distinct alternative to the original diagram: profile anonymization is broken out as its own use case, and rescheduling replaces therapist preference as the extend relationship.

Teal = employee-initiated | Coral = therapist-initiated | Gray = shared / system-level

Include Relationships:

- "Schedule Counseling Session" includes "Check Therapist Availability"
- "Conduct Counseling Session" includes "Log Session Summary"

Extend Relationship:

- "Schedule Counseling Session" is extended by "Reschedule Session" (optional, only when the employee needs to change an existing booking)

Difference from the original diagram:

- "Generate Anonymous Pseudo-ID" is promoted from an include-relationship to its own standalone use case, "Create Anonymous Profile".
- "Update Wellness Indicators / Journal" and its include, "Track Wellness Progress", are replaced by the simpler "Take Wellness Assessment".
- The extend relationship changes from "Select Preferred Therapist (Optional)" to "Reschedule Session".
- "Update Session Notes & Outcomes" is renamed "Log Session Summary" as an include of "Conduct Counseling Session".
- A new therapist-side use case, "Manage Availability Calendar", is added.

6. Use-Case Flow Specification

Use Case Name: Reschedule Session

Primary Actor: Corporate Employee

Secondary Actor: Licensed Therapist

Postcondition (Success): The existing counseling appointment is moved to a new confirmed slot, still linked to the employee's anonymous pseudo-ID, and the previous slot is released back to availability.

Postcondition (Failure): The original appointment remains unchanged, and the employee is informed that the reschedule could not be completed.

Main Success Scenario:

1. The Corporate Employee selects an existing booked session and chooses Reschedule Session.
2. The system retrieves the current appointment linked to the employee's pseudo-ID.
3. The system displays available appointment slots for the same or a different therapist.
4. The employee selects a new appointment slot.
5. The system verifies the availability of the newly selected slot (Check Therapist Availability).
6. The system releases the original slot back to the availability pool.
7. The system re-links the employee's pseudo-ID to the new confirmed slot.
8. The system confirms that the session has been successfully rescheduled.
9. The updated appointment is reflected in the employee's appointment list and the therapist's schedule.

Alternate Flow: Selected New Slot Is Unavailable:

A. The employee selects a new appointment slot.

B. The system determines that the selected slot is no longer available.

C. The system informs the employee that the reschedule cannot be completed and the original appointment remains active.

D. The system displays other available appointment options.

E. The employee selects another available slot and continues from Step 5 of the Main Success Scenario.
